templates are used to generate all kinds of text including computer code the last decade the use of templates gained a lot of popularity due to the increase of dynamic web applications templates are a tool for programmers and implementations of template engines are most times based on practical experience rather than based on a theoretical background this

book reveals the mathematical background of templates and shows interesting findings for improving the practical use of templates first a framework to determine the necessary computational power for the template metalanguage is presented the template metalanguage does not need to be turing complete to be useful a non turing complete metalanguage enforces separation of concerns between the view and model second syntactical correctness of all languages of the templates and generated code is ensured this includes the syntactical correctness of the template metalanguage and the output language third case studies show that the achieved goals are applicable in practice it is even shown that syntactical correctness helps to prevent cross site scripting attacks in web applications the target audience of this book is twofold the first group exists of researcher interested in the mathematical background of templates the second group exists of users of templates this includes designers of template engines on one side and programmers and web designers using templates on the other side

presupposition fails we now give a short introduction into unification grammar since all implementations discussed in this volume use prolog with the exception of blockjhaugeneder we felt that it would also be useful to explain the difference between unification in prolog and in ug after the introduction to ug we briefly summarize the main arguments for using linguistic theories in natural language processing we conclude with a short summary of the contributions to this volume unification grammar 3 feature structures or complex categories unification grammar was developed by martin kay kay 1979 martin kay wanted to give a precise definition and implementation of the notion of feature linguists use features at nearly all levels of linguistic description in phonetics for instance the phoneme b is usually described with the features bilabial voiced and nasal in the case of b the first two features get the value the third nasal gets the value feature value pairs in phonology are normally represented as a matrix bilabial voiced i nasal feature matrix for b in syntax features are used for example to distinguish different noun classes the latin noun murus would be characterized by the following feature value pairs gender masculin number singular case nominative pred murus besides a matrix representation one frequently finds a graph representation for feature value pairs the edges of the graph are labelled by features the leaves denote the value of a feature

contents this volume among others covers the following topics installation of the development environment lazarus basics of programming in free pascal modular programming with units creation of simple graphical user interfaces using the

printer from your own programs creation and editing of simple graphics visualization of dynamic processes by numerous characteristic application examples the reader is quickly enabled to create individual applications with lazarus by himself of course typical pitfalls are clearly pointed out future volumes that deal with database techniques internet applications and software technological aspects are under preparation further information about the book can be found at informatik ganz einfach de targeted groups students of computer science mathematics engineering and natural sciences both beginners and those who are changing from other programming languages or development environments who would like to get to know the possibilities of the free development environment lazarus more intensively or are planning to switch to this development tool
